STEP-BY-STEP GUIDE

- 1 Connect the plug of the cover C with pump B and screw the cap to fix them.
- 2 Connect the tube of cover C with pump B.
- 3 Make the plug of pump B go through the tube of fountain body D. Plug the black cap of pump's electrical wire into the top of the tube inside the fountain body.
- 4 Connect the pump B with transformer A and screw the cap to fix them. Then fill the fountain with water. Make sure the water line is between MIN and MAX line. Replace fountain cover C and plug in power. Adjust the water flow control setting on the pump B as needed.

PRODUCT TROUBLESHOOTING

PROBLEM	POSSIBLE CAUSES	SOLUTION
Fountain pump fails to operate.	Outlet has not power. “Air locked”.	Check the circuit breaker and try another outlet. Plug and unplug the pump several times.
Fountain pump fails to operate.	The water level is too low. The setting of flow was closed.	Make water higher than the MIN line. Check the setting of the flow control on the pump.
Fountain is leaking after add water.	The water has exceeded the MAX line.	Keep water lower than MAX line.
Pump is running slowly.	The water/tube is not clean.	Keep fountain clean and change the water regularly.

CARING FOR YOUR ITEM

- 1 Verify water level frequently to compensate for evaporation during the summer. Keep the water level between MIN and MAX line.
- 2 This fountain is designed to function with water only.
- 3 Never leave a running fountain unattended.
- 4 During Winter, this fountain must be stored indoors. Disconnect power supply, carefully empty fountain of all water, store indoors on water-resistant surface.
- 5 While this fountain is designed to operate as splash-free as possible, some water splashing out of the fountain is inevitable. Place your fountain in location where any splashing will not cause damage.
